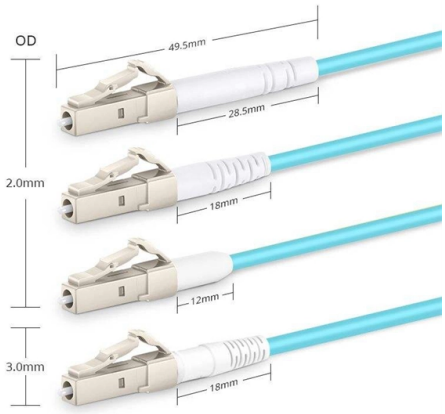
35kV bus capacitor current



Simplex LC UPC

Overview

The 35 kV distribution system is entirely cable-based. Based on the 35 kV cable types and lengths in the substation, the system capacitive current is calculated as follows: According to substation engineers, the capacitive currents for buses I, II, and III are each Ic = 50 A. There are three 35 kV. Capacitor Voltage Transformer 35kV For Bus Bar is consists of capacitor voltage divider and electromagnetic unit the medium voltage terminal and low voltage terminal of capacitor voltage divider are lead out into an oil tank equipped with electromagnetic unit. The electromagnetic unit consists of. In variable speed drives (VSDs), inverters and industrial power conversion systems, the DC bus capacitor bank is one of the most essential components. Different from the com-mon way of hold-up functions, wether in a 24 V system or a 110 V system, the BUS pin alwa ee chapter «Inrush Current Limitat on») The use of a Hold-Up capacitor helps.
