4-core fiber optic single-mode

Overview

4 Core Single Mode Fiber with OWIRE Solutions The term *4 core single mode fiber* refers to an advanced type of optical fiber cable that contains four inde.

Key Takeaways

A 4-core single-mode fiber optic cable contains four individual fibers designed for long-distance, high-bandwidth communication, suitable for FTTH, GPON, and backbone networks.

Structure and Design

A typical 4-core single-mode fiber optic cable consists of four main components: the optical fibers, a PBT loose tube filled with jelly compound, multi-strand aramid yarn for tensile strength, and a PE or PVC outer jacket for protection. Some variants include steel armor for outdoor or direct burial applications, enhancing durability and rodent resistance. Each fiber has a 9/125 µm core-to-core diameter, allowing only a single mode of light to propagate, which minimizes signal attenuation over long distances.

Applications

These cables are widely used in FTTH (Fiber to the Home), GPON networks, ISP backbones, campus networks, and industrial or CCTV systems. The 4-core configuration provides redundancy and scalability, enabling multiple services or future expansion without laying additional cables. They are suitable for both indoor duct installations and outdoor deployments, with armored or messenger-wire variants for aerial or direct-burial setups.

PerformanceSingle-mode fibers support long-distance transmission exceeding 100 km with minimal signal loss. They are tested at wavelengths of 1310 nm, 1550 nm, and 1625 nm to ensure integrity, low splice loss, and compliance with international standards such as ITU-T G. 652.

D. Pre-terminated cables with connectors like SC, LC, or FC reduce on-site labor and splice losses, though they may carry a higher initial cost.

Pricing Considerations

The cost of a 4-core single-mode fiber optic cable depends on raw material quality, jacket type, length, armored protection, UV resistance, and pre-termination. Bulk purchases often reduce per-meter costs, while specialized outdoor or armored cables are more expensive due to added materials and manufacturing complexity.

Summary

A 4-core single-mode fiber optic cable is a high-performance, reliable solution for medium-scale networks requiring long-distance, high-bandwidth communication. Its design ensures durability, low attenuation, and scalability, making it ideal for both residential and enterprise network deployments.

4 Core Single Mode Fiber with OWIRE Solutions

The term *4 core single mode fiber* refers to an advanced type of optical fiber cable that contains four independent light-guiding cores within a single cladding structure, each capable of

Single Mode Fiber Optic Cables

Find premium single mode fiber optic cables for high-speed data transmission. 20 years of expertise and worldwide delivery.

Fiber Optic Cable 4 Core Single Mode

Description: Includes 4 individual single mode fibers within a single cable. Benefits: Provides a compact yet effective solution for medium-density applications, allowing multiple channels and reliable data

What Makes Fiber Optic 4 Core Single Mode Stand Out?

What Sets Fiber Optic 4 Core Single Mode Apart? When it comes to fiber optic cables, especially the 4 core single mode variety, many people find themselves puzzled. What makes these cables stand

FTTH4Core-SM-Indoor Fiber Drop Cable

© 2026 DOLPHIN FIBER SYSTEMS - All rights reserved

4Core Indoor FTTH Drop Cable FTTH indoor drop cable is constructed with two single mode fiber. The cable is protected by a dielectric strength member made of fiberglass reinforced plastic (FRP) and a

4 core single mode armored fiber optic cable

4 core single mode armored fiber optic cable What is 4 core fiber optic cable? just as the name implies,4core is 4 fibers cover in the cable tube. 4 core fiber

Fiber Optic Cable 4 Core Single Mode

Overview: Rayoptic Communication Co., Ltd (Rayoptic) offers top-quality 4-core single mode fiber optic cables designed for high-performance and reliable data transmission in various networking

Single Mode vs. Multimode Fiber: Core Differences and Selection Guide

How do you choose between single mode and multimode fiber? Compare their differences in core size, light source, bandwidth, transmission distance, and cost to identify the right application.

DRAKA optical cable 4 core, singlemode

DRAKA optical cable 4 core The incessant increase in data traffic is causing an exploding demand for transmission capacity and network infrastructure. New technologies such as 5G, Internet of Things

4 Core Optical Fiber Cable

Our 4 Core FTTH Single Mode Optical Fiber Cables are designed to meet the specific needs of telecom operators and ISPs. They provide high-performance connectivity and ensure that your data is

What is 4 core fibre cable?

A 4-core fiber optic cable is a type of cable that contains four individual optical fibers within a single protective jacket. These fibers are used to transmit data as light

4 Core Singlemode Armored Fiber Optic Cable Per Meter

4 Core Singlemode Fiber Optic Cable locates in the centre of core as metallic strength member, tubes (fillers) are stranded around the strength member into compact and circular cable core, PSP is

Fiber Optic Cable Types – Multimode and Single Mode

© 2026 DOLPHIN FIBER SYSTEMS - All rights reserved

Single Mode fibers are identified by the designation OS or Optical Single-mode Fiber. Single Mode cable has a much smaller core (8-9um) than multimode cable and uses a single path (mode) to carry the light.

The Ultimate Guide to 4 Core Optical Cable: Specs,

This guide covers everything you need to know about 4 core fiber, including its internal structure, TIA standard color coding, and how to choose the

Single-mode optical fiber

In fiber optics, a quadruply clad fiber is a single-mode optical fiber that has four claddings. Each cladding has a refractive index lower than that of the core.

Single-Mode Optical Fiber (SMF)

Draka Single-Mode Fiber (SMF) provides optimum performance in both the 1310 nm and 1550 nm wavelength operation ranges (including the 1565 – 1625 nm L-band), with a low dispersion in the
