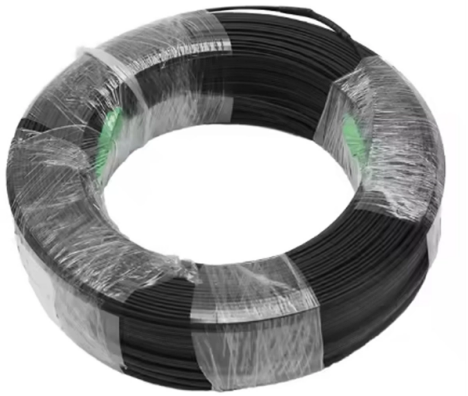
Fiber Optic Cable Optical Analyzer



Overview

An OSA provides the functions and capabilities to measure key fiber-optic-cable characteristics quickly, accurately, and repeatably. An OSA measures and displays the distribution of light across a single wavelength or wavelength range. Fiber-optic cables consist of glass or plastic cores surrounded by cladding which reflects light back into the core to help. Fiber optic cable is a type of cabling that contains one or more optical fibers for transmitting data at high speeds and/or over long distances using light. These fibers are most commonly made of glass and are very thin, typically less than a tenth of the width of a human hair. Fiber optic cable. Fluke Networks has a wide range of Fiber Optic testing products to help certify that power losses are within standards and to troubleshoot broken and high loss links on single-mode and multimode fiber all with ease-of-use, accuracy, and durability. Get pass/fail results in seconds. This category includes OLTS certifiers, OTDRs, optical power meters, light sources, and visual fault locators. Designed for singlemode and multimode applications, fiber testing tools help. 9-in-1 Cable Testing Multifunctionality: Combines 9 key functions including wire mapping, digital cable tracing, port flashing, cable length measurement, PoE checking, crimping test, OPM (optical power meter), VFL (visual fault location), and NCV (non-contact voltage) test, streamlining network.
