KVM switch cannot shut down

Overview

Solution: First, check if the switch's power indicator light is on and ensure the power source is properly connected. If there's a power switch, make sure it's in the “On” position. What Do You Need?

Administrator privileges. Name of the inactive KVM instance. For remote KVM instances, the following is required to complete the remote example. I recently purchased a KVM (AV Access 4KSW21-DM) to switch between my desktop computer (Dell XPS 8950 Win 11) and a laptop. An odd thing is happening when the keyboard is plugged to the USB 1. Even trying to stop or reset doesn't work. If a guest is unresponsive and will not shut down cleanly, destroy pulls the plug immediately, similar to yanking the power cord on a physical server.
