Best Method for Pulling Cable Trays into Cable Trench

Overview

The following lifting methods for reels are recommended: Insert a suitable properly-secured shaft through the reel arbor hole and lift with slings using a crane or boom-type equipment. Use a spreader or other device to minimize sling pressure against the reel flange. Applies to above-ground tray/ladder routes, buried trenches/duct banks, HDD crossings, and sitewide corridors for power, control, instrumentation, F&G, telecom, and fiber. Document number/title follow project numbering; “Cable Routing / Trench Layouts” clearly stated with unit/area/corridor. This Method statement covers the installation and final electrical connections to the MV and LV equipment at any electrical project site. All the electrical installation work will be in accordance with the project electrical specifications. Scope of Work This procedure covers the method for all. To protect cables from physical damage and the environment, store indoors and protect from moisture, construction equipment, falling objects, chemical spills, moving vehicles, and other hazards.
