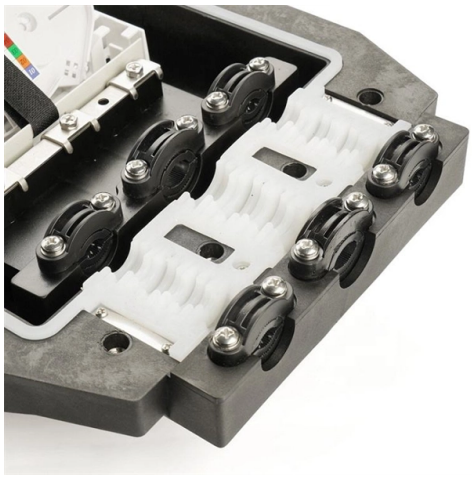
Can surveillance systems operate without a core switch



Overview

For systems with fewer than 32 channels, a core switch is generally unnecessary. Do I need a core switch for my 150-channel surveillance cameras?

Many engineers also say that I can manage 300 cameras without a core switch, and that's fine! With 10 years of experience as a security R&D engineer, I will tell you how to configure a core switch for cameras. ACCESS LAYER The switches in this layer are directly connected to computers and enable various resources to access the network. We will use. I am confused if the Cisco S G-300-28 MP as an access switch and catalyst 3850 as a core switch will be the best choices to operate the network with full performance without delay and video drop in live view and recording. Note: the access-core up-link is 1 G bps. the. When setting up a surveillance system, three critical networking devices often come into play: modems, routers, and switches. Each serves a unique purpose in ensuring your security cameras function optimally.
