Core Switch Network Segmentation

Overview

Network segmentation with switches involves dividing a network into smaller, isolated segments to enhance security, improve performance, and simplify management. Learn how to configure a switch for network segmentation effectively by using VLANs, subnetting, and access control lists (ACLs). Extreme Networks delivers comprehensive switching solutions that provide seamless segmentation, automated operations, and carrier-grade reliability from the access layer to the network. We're currently using a pair of Fortigate 600E's in Active-Passive HA, presenting 1Gb interfaces for our LAN, Management, STZ, DMZ which sit on separate switches. My idea was to route everything through the Fortigate on a VLAN trunk over the 10Gb SFP+ interface in an Active-Active HA configuration. Sitting at the top of the hierarchical model, core switches interconnect distribution layer switches and provide high-speed data transfer across. It is the top tier of the classic Cisco three-tier hierarchical network model, designed to organize complex IT environments into manageable, scalable, and predictable layers. Traditional 3-Tier Network Design).
