Croatian Active Optical Cable OSFP

Overview

Arista offers customers a wide variety of optical and copper connectivity options for datacenter and high-performance computing environments.

Key Takeaways

OSFP Active Optical Cables (AOCs) provide high-speed, high-bandwidth connectivity for data centers and high-performance computing, supporting up to 800G per cable with PAM4 signaling.

Overview

The Octal Small Form Factor Pluggable (OSFP) AOC is a high-density, high-speed optical interconnect designed for modern data centers, AI clusters, and HPC environments.

OSF

P cables support aggregate bandwidths up to 800G per cable using eight 100G–224G PAM4 lanes, with scalability to 1. 6Tbps in stacked configurations. These cables are engineered for efficient thermal management, signal integrity, and compliance with OSFP MSA and IEEE standards.

Technical Specifications

Channels and Bandwidth: Each OSFP AOC has 8 duplex channels, with aggregate bandwidths of 800G. Each channel operates using PAM4 modulation at 53. 125Gbaud.

© 2026 DOLPHIN FIBER SYSTEMS - All rights reserved

Reach: Supports up to 60 meters on OM3 fiber and 100 meters on OM4 fiber. Signaling Protocols: Compatible with 25G/lane NRZ and up to 224G/lane PAM4 signaling. Connector Compatibility: Works with OSFP connectors and supports direct-attach cables (DACs), active copper (ACC/AEC), and active optical cables (AOCs).

Applications: Ideal for hyperscale data centers, AI/machine learning clusters, and high-performance computing where high bandwidth and low latency are critical.

Features

Active Control: OSFP AOCs allow application selection and instantiation via CMIS or simplified custom methods, ensuring both ends of the cable are synchronized. Adaptive Equalization: Default TX and RX adaptive equalization is enabled to maintain signal integrity over longer distances.

Thermal and EM

I Management: OSFP connectors and cables are designed to reduce heat buildup and provide EMI shielding, improving reliability in dense deployments. Form Factor Advantages: Slightly larger than QSFP-DD, OSFP offers better thermal performance and higher power support, making it suitable for ultra high-speed applications. AvailabilityOSFP AOCs are available from multiple vendors, including COMNEN, TE Connectivity, Molex, Proficium, and Amphenol, offering both active and passive variants with varying lengths and bandwidths to suit different deployment needs.

Summary

Croatian OSF

P Active Optical Cables are high-performance, scalable solutions for modern data centers, providing up to 800G per cable, robust thermal management, and compatibility with multiple signaling protocols. They are particularly suited for AI-driven workloads, HPC, and hyperscale networking, offering reliable, high-speed connectivity with flexible deployment options.
