Fiber optic cable entry inspection

Overview

First step is to make an accurate inspection of the ferrule, using a video microscope. Each type of connector has a different ferrule diameter. Therefore, the correct probe. cations, security, control and similar purposes. It defines a minimum leve e fiber optic cabling extends between buildings. Although the standard covers premises installations, many of the provisions included here ar SI/ NFPA 70, the National Electrical Code (NEC). The primary reason for fiber inspection is to ensure that the connectors are free of any defects, damage, or debris that would prevent sufficient transmission of light when mated. This document describes inspection and cleaning processes for fiber optic connections. Simply connect the fiber optic connector to the microscope. Fiber optic cables use light to transmit data, which requires precise installation to avoid signal loss or damage.
