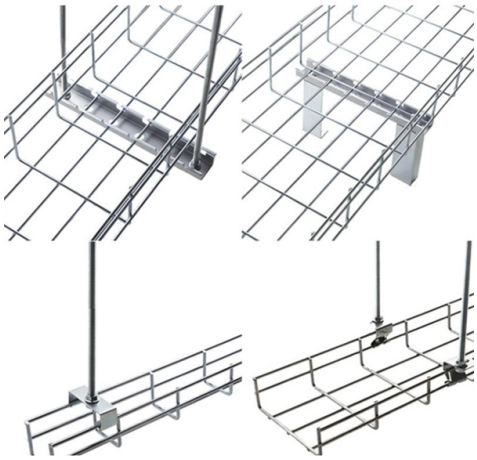
Fiber optic switch LAN speed



Overview

Fiber optic technology allows for higher data transfer speeds, with many switches supporting speeds from 1 Gbps to 100 Gbps. These switches play a central role in building robust, modern. VERSITRON manufactures a wide range of fiber optic switches that provide links for your 10Base, 100Base, 1000Base Gigabit, and 10 Gigabit networks simultaneously. Various port sizes are available ranging from 4 up to 52 ports. We offer solutions that provide seamless transmission and conversion. The LevelOne FEU-0511 is a compact 5-port Fast Ethernet switch with an integrated media converter, designed to bridge copper and fiber networks in small offices, industrial sites and remote locations. It provides 4 x 10/100BASE-TX RJ45 ports for copper connections and 1 x 100BASE-FX SC multi-mode. Network switches are devices that work at Layer 2 of the OSI model and enable path switching over devices attached to the switch using MAC addresses to enhance throughput by creating virtual channels to each data intended to be sent over the network, thereby lowering the chances of data clashes. Network Congestion High traffic from multiple devices can cause bottlenecks.
