OZ Optics V-Groove array assemblies assist in developing next generation photonic devices. The arrays are manufactured using precision silicon wafer V-Groove technology or Pyrex V-Groove in conjunction with a Pyrex lid, enabling sub-micron alignment accuracy with UV cure attachment capabilities. OZ. Fiber Optic Testing Testing is used to evaluate the performance of fiber optic components, cable plants and systems. Careful and comprehensive fiber optics testing helps technicians detect issues such as signal loss, interference. ic system. Corning recommends that all fiber optic systems be tested to a minimum set. The PM V-Groove arrays are mass produced to be incorporated in various photonic devices, particularly for high speed 40 Gb/s to next generation 100 Gb/s coherent detection systems. The requirements are based on National and International accepted.
