# Does the distribution box include cable winding Price

## Overview

The distribution box cost typically ranges from affordable basic models to premium solutions, depending on capacity, features, and specifications.

## Key Takeaways

Distribution boxes typically provide space for cable organization but do not include pre-wound cables; prices vary widely based on type, capacity, and features.

### Cable Winding and Management

Distribution boxes, also known as breaker boxes or electrical enclosures, are designed to organize and protect electrical connections. They include internal space and features for routing and securing cables neatly, which simplifies installation and maintenance. However, they generally do not come with pre-wound cables; the cables must be supplied and installed separately according to the specific electrical layout.

Some modular or pluggable systems, like FieldPower® boxes, allow easy connection of cables using push-in or busbar systems, but the actual cable winding is still performed on-site.

### Price Range

The cost of a distribution box depends on several factors, including: Type: Residential, commercial, or industrial boxes have different specifications and durability requirements. Capacity: Number of circuits, voltage rating, and amperage affect pricing. Material and Features: Metal or plastic enclosures, IP protection rating, smart monitoring, and surge protection can increase cost.

Installation and Customization: Pre-assembled or parameterized units may cost more due to added convenience. Typical price ranges are: Residential single-phase boxes: $50–$200 depending on size and features. Commercial or industrial three-phase boxes: $200–$1,000 or more, especially for weather-resistant or high-capacity units.

Customized or smart distribution boxes: Prices can exceed $1,000 due to advanced monitoring, modularity, or integration with building management systems.

### Summary

While distribution boxes provide organized space for cable routing, they do not include pre-wound cables. Prices vary widely based on type, capacity, material, and additional features, ranging from $50 for basic residential units to over $1,000 for industrial or smart systems. For specific projects, it is recommended to consult suppliers for a tailored quote that includes installation and any optional cable management accessories.
