# Optical Module Power Consumption Test

## Overview

To test transmitted power in sfp optical modules, you use an optical power meter to get exact results. Getting correct test transmitted power readings helps your network. The International Photonics & Electronics Committee (IPEC) is an international standards organization that is committed to developing open optoelectronic standards and delivering strategic roadmap reports. IPEC focuses on standardizing solutions in optical chips, optical/electrical components, and. InfiniBand offers a technological pathway for building AI/ML networks, with its primary advantages being low static forwarding latency and hardware fault self-repair. Without systematic optical module testing, it becomes difficult to identify whether transmission. The Transmitter Optical Sub Assembly (TOSA) is responsible for the emission of light. Its primary function entails converting electrical signals into optical signals.
