Relay protection frequency

Overview

The frequency protection relay measures the frequency and outputs contact when the frequency drops below the lower setpoint of frequency. The relay contact can be used for load shedding of non-critical loads or for total disruption of the supply. There are two independent protections: Under/overfrequency protection. Protective Relays - Technical Seminar Nov 2016 - Copyright: IEEE 2 Abstract: Protective relays and devices have been developed over 100 years ago to provide “lastline”of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of the system. Detection of abnormally high frequency compared to the rated frequency, to monitor power supply quality. The first numerical relays were released in 1985.
