Remove ARP from core switch

Overview

Use the clear arp command to delete a specific entry or all entries from the ARP table. Keyword that specifies every IP address in the ARP. One of the VLANs (VLAN 30) is a private VLAN with an associated isolated secondary VLAN (VLAN 31). Part of the config is as follows: interface Vlan30 ip address 10. Cisco IOS CLI provides two different commands that seem the same on the surface but have a slightly different outcome on the wire. Based on the title you probably guessed that it's clear arp-cache vs clear ip arp. 0/30 with a SPAN. The Address Resolution Protocol (ARP) is essential for mapping IP addresses to MAC addresses, enabling seamless communication in a local network. ARP table issues can lead to network connectivity problems, packet loss, slow performance, or even security vulnerabilities like ARP spoofing.
