Intelligent Configuration Scheme for Quantum Communication Optical Modules

Overview

We propose a hybrid optoelectronic integrating scheme for QKD modules based on chip-on-board technology, which co-packages the QKD-encoding pho-tonic chip and its required electronic driver chips within a compact, centimeter-scale module. In this paper, we propose protocols and algorithms to automate two such manual processes. Then, we turn to the more complex challenge of identifying the nodes. Quantum key distribution (QKD) technology is progressively transitioning from experimental research to industrial development. Current integrated QKD research primarily focuses on the. The ongoing second quantum revolution stands as a timely opportunity for a state-of-the-art review and, most important, an exploration of the directions undertaken by integrated quantum photonics. Within this perspective, based on the recent advances, we discuss the current challenges and future. As a new research and deployment project in the EuroQCI initiative, TransEuroOGS aims to establish a network of interoperable optical ground stations for satellite-based quantum-secure communication across four EU Member States: Germany, Greece, Ireland and Luxembourg. So-called fixed nodes are to ensure communication over distances of a few kilometers.

Article Content

Automatic Configuration Protocols for Optical Quantum Networks

In this work, we focus on the lowest layers of communication for quantum networks, and explore potential quantum equivalents for MAC addresses and network address translation.

Automatic Configuration Protocols for Optical Quantum Networks

Abstract—Before quantum networks can scale up to practical sizes, there are many deployment and configuration tasks that must be automated. Currently, quantum networking testbeds are largely

APN-25-117011 1.

We propose a hybrid optoelectronic integrating scheme for QKD modules based on chip-on-board technology, which co-packages the QKD-encoding pho-tonic chip and its required electronic driver

Hybrid optoelectronic-integrated for quantum communication module

We propose a hybrid optoelectronic integrating scheme for QKD modules based on chip-on-board technology, which co-packages the QKD-encoding pho-tonic chip and its required electronic driver

Large-scale quantum communication networks with integrated

Here we report a proof-of-principle demonstration of an integrated-photonics TF-QKD network with exceptional scalability and reliability. This network includes 20 independent client-side

Integrated Photonics for Quantum Communications and

It encompasses the on-chip generation, manipulation, storage, and detection of photonic quantum information, showcased through applications in

Secure quantum communication across borders | FAU

A new project involving FAU will link optical ground stations across Europe As a new research and deployment project in the EuroQCI initiative, TransEuroOGS aims to establish a

QuNET & FuNK

To this end, the continuation of the QuNET project is developing optical communication systems that use quantum key distribution (QKD) as well as data

Quantum Technology Fueling the Next Generation Optical

© 2026 DOLPHIN FIBER SYSTEMS - All rights reserved

This could be possible with the integration of OFC and OWC with emerging quantum communication technologies (quantum key distribution, quantum entanglement, quantum repeaters,

Classical-decisive quantum internet by integrated

Integrating quantum information processing with advanced photonic technologies allows for the precise encoding of a quantum-classical hybrid data

Energy and bandwidth efficiency optimization of quantum-enabled optical ...

We present a systematic study of quantum receivers and modulation methods enabling resource efficient quantum-enhanced optical communication. We introduce quantum-inspired

Classical-decisive quantum internet by integrated

Classical and quantum technologies have traditionally been viewed as orthogonal, with classical systems being deterministic and quantum systems

Quantum Technology Fueling the Next Generation Optical Communication ...

In addition, the possible integration of these systems with quantum communication technologies and the recent progression have been outlined. Finally, the possibility of future research

Secure Long-Distance Quantum Communication over Optical

Budapest University of Technology and Economics, Department of Telecommunications Hungary In today''s communication networks, the widespread use of optical fiber and passive optical elements

Quantum for 6G communication: A perspective

This paper discusses the details and importance of quantum concepts, such as QC, quantum communication and quantum security as

Recent progress in quantum photonic chips for quantum communication

Recent years have witnessed significant progress in quantum communication and quantum internet with the emerging quantum photonic chips, whose characteristics of scalability, stability, and low ...

Securing and optimizing optical transmission in quantum wells using

In conclusion, optical transmission in quantum wells is optimized to enhance communication network performance through the integration of light-based OAM beams.

Experimental demonstration of secure 100 Gb/s IMDD ...

© 2026 DOLPHIN FIBER SYSTEMS - All rights reserved

We propose and numerically demonstrate a scheme of coherent optical chaos communication using semiconductor lasers for secure transmission of optical quadrature amplitude
