# Testing Fiber Optic Splitter

## Overview

Testing a splitter or other passive fiber optic devices like switches is little different from testing a patchcord or cable plant using the two industry standard tests, OFSTP-14 for double-ended loss (connectors on both ends) or FOTP-171 for single-ended testing. They have been used since the 1980s to create networks and provide the technology for today's passive optical networks used in fiber to the home. Optical splitters are usually used in passive optical networks (PONs) to distribute fiber to individual homes or businesses. It is a crucial component in Passive Optical Networks (PON) and is widely used in telecommunications, CATV (Cable TV), and FTTH. EXFO's PON-optimized OTDRs (e., macrobends, splices, bad connectors. The CertiFiber® Pro Optical Loss Test Set (OLTS) can be used to check that the loss of a PON Splitter (often referred to in various standards as a non-wavelength-selective or wavelength-selective branching device) to check that it is within the allowed defined limits.

## Article Content

Tutorial of Optical Splitter Loss Test

Optical splitters are widely used in passive optical networks. Splitter loss is an important parameter of fiber optic splitters. How to Test Optical Splitter

How to Test the Loss of Optical Splitter?

By addressing these common issues and following the troubleshooting tips provided, you can enhance the accuracy and reliability of

Quick guide to testing FTTH | Brochure | EXFO

© 2026 DOLPHIN FIBER SYSTEMS - All rights reserved

Measuring the length of fiber, its loss and ORL, and verifying the absence of any fault (e.g., fiber break, macrobending, dirty connector, bad splice) are basic yet essential checks in ensuring link quality.

Testing a Balanced PON Splitter with CertiFiber Pro

This article describes the correct method for testing a balanced PON splitter for port loss using the CertiFiber® Pro, there will be a further article to address

Troubleshooting Optical Splitters | ICT Solutions & Education

In this case use an optical power meter (OPM) and test the input port of the splitter for the optical power level (dBm) from the OLT at 1490 nm. If there is no or reduced power then the patchcord or OLT is

How to test the performance of fiber optic splitters?

The following are detailed steps and key indicators for testing the performance of fiber optic splitters, combining industry standards and practical tips: Light source (1310nm/1550nm dual

Step-by-Step Manufacturing Process and Quality Testing of a 1x2

Testing the quality of the fibre optic splitter. The quality of a fibre optic splitter is primarily governed by five specifications: optical bandpass, insertion loss, return loss, uniformity, and directivity.

Need a faster way to test optical fibers with one or several PON ...

With the FTTH-SLM (Smart Link Mapper) Application installed on your VIAVI OTDR you can test an entire fiber link and easily understand results. And this twice as fast and more reliable than any

How to test fiber optic splitters or other passive devices

How to test fiber optic splitters or other passive devices A fiber optic splitter is a device that splits the fiber optic light into several parts by a certain ratio. For example, when a beam of fiber optic light

Optical Communications Products

Browse our optical communication connectivity products designed to help you enable your communication networks. Easily create a bill of materials list.

How to Test the Loss of Optical Splitter?

Optical splitters are vital components in fiber optic networks, distributing signals from a single input fiber to multiple output fibers. However,

Testing a balanced PON Splitter with CertiFiber® PRO

*© 2026 DOLPHIN FIBER SYSTEMS - All rights reserved*

Testing a balanced PON Splitter with CertiFiber® PRO The CertiFiber® Pro Optical Loss Test Set (OLTS) can be used to check that the loss of a PON Splitter (often referred to in various standards as

Tutorial of Optical Splitter Loss Test

Optical splitters are usually used in passive optical networks (PONs) to distribute fiber to individual homes or businesses. There is something different between testing an optical splitter and a

Testing Fiber Optic Couplers, Splitters Or Other Passive

Testing a splitter or other passive fiber optic devices like switches is little different from testing a patchcord or cable plant using the two industry standard tests,

Operation, Maintenance & Calibration of a Fiber Splitter

Discover expert services for operation, maintenance, and calibration of fiber splitters to Learn best practices for ensuring optimal performance, minimizing downtime, and extending the lifespan of your

Comprehensive Introduction of Fiber Optic Splitter

Fiber optic splitter is significant in helping users maximize the performance of optical network circuits. This article will help you to gain more

Passive optical network

Passive optical network A fiber optic cable assembly with SC APC connectors, as commonly used to link optical network terminals to passive optical networks A

How to Test Optical Splitter Loss With Optical Power Meter & Light ...

This tutorial illustrated the details of using optical power meter and light source to test optical splitter loss. Related products such as high-quality PLC splitters and testing tools such as
