Micro-module underground air supply static pressure duct

Overview

Product Features: Easy to Install / Applications are Zone Damper and Bypass Damper / Available in 120V and 24V / It is Supplied with or without a Damper PIM: Modulates to maintain Static Pressure at points in the Supply Air Ducts set within the Therma-Fuser working Range. The purpose of the air-handling unit (AHU) static pressure control guide is to show, through examples of good and bad operations, how the static pressure can be efficiently controlled. The PIM has a field adjustable static pressure set point and may be used in either a s quick and easy to install. The PIM is available as a stand-alone or networked device and a variety of damper shapes and sizes are available so that it can be incorpora point, and. This Application Note describes how to use Direct Digital Control (DDC) to implement duct static pressure control. discharge static pressure increases above its. This page covers how static pressure is defined in the context of forced-air duct systems, what causes it to rise or fall outside design limits, how technicians measure it, and what design or installation factors determine whether a system operates within acceptable boundaries.
