Monitoring splitter cannot be connected

Overview

The issue with an HDMI splitter not working can be attributed to various factors, including the lack of a fully HDCP-compliant setup, faulty HDMI cables, or compatibility issues with the source devices and the TV or monitor. HDCP, or High-bandwidth Digital Content Protection, is a protocol. If you're having trouble setting up multiple monitors on Surface, see Troubleshoot connecting Surface to a second screen. Troubleshoot issues that occur when setting up external monitors If you are trying to set up an external monitor and it's not working, press the Windows logo key + P to make. HDMI splitters allow the extension of a computer's display across multiple monitors by splitting the video signal between several attached screens. But occasionally, computers fail to detect the attached splitter and secondary displays, preventing the use of the full multi-monitor configuration. Here are a few typical problems you may encounter with HDMI splitters, along with their potential fixes: 1. Passive HDMI. Settings cannot be changed because the second monitor is not detected in settings. The button "Detect monitor" does not work.
