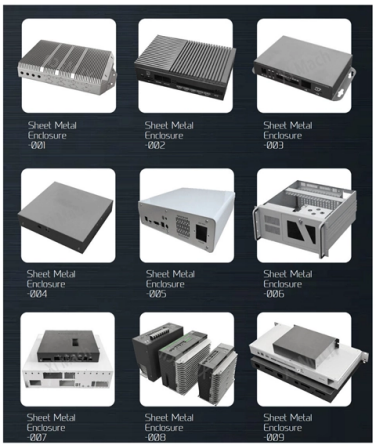
Multimode 4K Fiber Optic



Overview

4K HDMI Over Fiber IP Extender Singlemode Extend an Ultra-HD 4Kx2K 60Hz 4:4:4 HDMI display up to 24.8 miles (40 km) away from the source via fiber. Broadca.

Key Takeaways

Multimode 4K fiber optic extenders allow high-quality 4K video and audio transmission over long distances with minimal latency, typically up to 300 meters for OM3/OM4 fiber.

Overview

Multimode 4K fiber optic extenders are designed to transmit Ultra HD 4K video (3840x2160) at 60Hz with 4: 4: 4 chroma subsampling over optical fiber, providing high-bandwidth, low-latency, and interference-free connections for professional AV, IT, and digital signage applications. They are ideal for environments where copper HDMI cables are impractical due to distance limitations or electromagnetic interference.

Key Features

High Bandwidth: Supports HDMI 2. 0 with up to 18Gbps, enabling HDR, Dolby TrueHD, DTS-HD Master Audio, and 7. 1-channel audio.

Distance: Multimode fiber (OM3/OM4) typically supports up to 300 meters (985 ft), while singlemode fiber can extend up to 40 km (24. 8 miles). Low Latency: Optical transmission ensures zero frame delay and compression-free video, making it suitable for real-time applications.

Signal Integrity: Immune to EM and RF interference, ensuring stable and pixel-perfect transmission in industrial or high-noise environments. Connectivity: Uses LC or SC fiber connectors and often includes support for IR, RS-232, and USB signals for remote control and KVM functionality.

Applications

Professional A

V Installations: Conference rooms, auditoriums, and control centers. Digital Signage: Retail, airports, and stadiums where displays are far from the source. Broadcast and Production: High-resolution video distribution without signal degradation.

Industrial Environments: Factories or facilities with high electromagnetic interference. Example ProductsPureLink 4K Premium HDMI Multi-Mode Fiber Extender: Supports up to 1,000 meters with OM4 fiber, zero latency, and secure connections via SLS™ locking system.

Wyre

Storm EXF-300-H2: Transmits 4K 60Hz HDR video up to 300 meters over OM3 multimode fiber, immune to EM/RF interference. Tripp Lite B127F-1A1-MM-HH: Extends 4K 60Hz HDMI video up to 985 ft (300 m) via duplex multimode LC fiber, with support for HDR and 4: 4: 4 color.

Considerations

Fiber Type: OM3/OM4 multimode fiber is standard for distances up to 300 meters; singlemode fiber is required for longer runs. Compatibility: Ensure HDMI version, HDCP compliance, and audio formats match your source and display devices. Installation: Proper termination and connector quality are critical for maintaining signal integrity over long distances.

Multimode 4K fiber optic extenders provide a reliable, high-performance solution for transmitting 4K video over distances that exceed the limitations of traditional copper HDMI cables, making them essential for professional AV and IT deployments.
