Advanced Protection Assessment (formerly PSS®CAPE) supports engineers in transmission and large distribution utilities, as well as some generation owners, across their entire protection workflow - from detailed data collection and electronic setting management to setting calculations and. Siemens PSS®CAPE software supports the system protection function within electric power utilities. Protection engineers face an ever-increasing landscape of challenges around power system protection. These challenges include the. My PSS/E knowledge is limited to: I can run load flow and dynamics cases using GUI and overlay apparent impedances with relay characteristic (. I would like to learn more detailed relay modelling and how to add them in an existing power system case and run the dynamics. Siemens Simulation Softwares : PSS SINCAL Power systems must respond quickly during faults. Even a short delay can damage equipment or interrupt supply.
