Specifications for Indoor Plastic Distribution Boxes

Overview

12/24F FTTH Indoor Use Plastic Distribution Box• Distribution panels can be flipped up, feeder cables can be placed in a cup-joint manner, easy to maintain.

Key Takeaways

Indoor plastic distribution boxes are typically made of durable ABS or PC plastics, offer IP40–IP66 protection, and come in various sizes and modular capacities for safe electrical or fiber distribution.

Material and Construction

Indoor plastic distribution boxes are generally constructed from high-quality engineering plastics such as ABS (Acrylonitrile Butadiene Styrene) or PC (Polycarbonate), providing high dielectric strength, impact resistance, and flame retardancy. Some models feature halogen-free and silicon-free materials to meet environmental protection standards. Doors may be transparent or opaque, allowing easy inspection of internal components without frequent opening.

Protection RatingsIP40: Suitable for indoor use, protects against solid objects larger than 1 mm but not water. IP65–IP66: Provides dust-tight and water-resistant protection, suitable for harsher indoor environments or areas with occasional moisture. IK09: Offers mechanical impact resistance, ensuring durability against accidental knocks.

Dimensions and Modular Capacity

Boxes are available in various sizes, ranging from small enclosures (e.g., 65 x 65 mm) to larger units (e.g., 361 x 254 mm) for multiple modules. Modular capacities typically include 12, 18, 24, 36, and 54 modules, allowing flexible installation of circuit breakers, busbars, or fiber connections. Some boxes support single, double, or triple layers, accommodating complex wiring or fiber distribution setups.

Installation and DesignWall-mounted or flush-fit designs optimize space usage in indoor environments. Boltless lock structures and built-in guide rails facilitate easy installation of terminals, busbars, or fiber connectors. Matte finish panels improve durability and reduce visible scratches, while RAL 7035 color provides a neutral aesthetic.

Environmental and Safety Compliance

Designed for indoor temperature ranges of -5°C to +40°C. Compliant with IEC 60529, IEC 62262, IEC 60695-2-10, EN 60670-1, and DIN EN 60670-24 standards. Glow wire tested at 650°C and UL 94 V-2 flame retardant rating ensures safety under extreme conditions.

Additional Features

Transparent doors for easy monitoring of internal components. UV-resistant materials for long-term durability even in areas with indirect sunlight. Suitable for industrial, commercial, and residential indoor applications, including electrical and fiber optic distribution.

These specifications ensure that indoor plastic distribution boxes provide reliable protection, ease of installation, and compliance with international safety standards, making them suitable for a wide range of electrical and fiber distribution needs.
