ST interface patch panel rack type

Overview

These rugged L-com rack panels are ideal for LAN interconnect or cross-connect patching. The rear cable minder allows tie down of incoming cables securing your connections.

Key Takeaways

ST interface patch panels are available in 1U or 2U rack-mount configurations, with options for sliding trays, fixed panels, and both multimode and singlemode fiber support. OverviewST (Straight Tip) patch panels are designed for fiber optic cable management in racks or cabinets, providing organized termination and interconnection points. They are commonly used in LAN, data centers, and telecom environments.

These panels can be fully loaded with ST adapters or supplied as unloaded panels for custom configurations.

Rack-

Mount Configurations1

U Panels: Standard 19-inch width, typically supporting 16 to 48 fiber ports. Examples include Tripp Lite's 16-port 1U ST/ST panel for multimode or singlemode fibers, with pre-loaded duplex connectors. 2U Panels: Higher density options, often supporting 54, 72, or 108 ports, suitable for larger installations.

Features

Sliding or Fixed Trays: Some panels, like the Universal Networks PPFSTMMDTSD, feature sliding drawers that allow angled access for easier installation and maintenance without removing the panel from the rack. Cable Management: Rear cable minders or multiple cable entry points help secure incoming fibers and maintain organized routing. Splice Support: Certain models, such as the FPP148 series, include splice trays, sleeves, and spools for optical splicing, supporting up to 48 fibers per 1U panel.

Material and Build: Panels are typically made from 16-gauge cold-rolled steel with black powder coating for durability. Adapter and Port OptionsPre-loaded Adapters: Panels can come with ST duplex adapters installed for immediate use. Unloaded Panels: Allow flexibility to install ST, SC, LC, or FC adapters as needed.

Port Density: Options range from 16 ports in 1U panels to 48 or more in high-density configurations.

Practical Considerations

Fiber Type Compatibility: Panels support multimode (62. 5/125 or 50/125) and singlemode (9/125) fibers. Installation: Sliding trays and removable top covers facilitate easier maintenance and fiber routing.

Customization: Some manufacturers offer blank panels for unused ports and optional adapters for different connector types.

S

T interface patch panels provide a flexible, organized, and scalable solution for fiber optic network management, with options tailored to both small and large rack installations.
