Standard wall clearance for distribution boxes

Overview

Clearance: Electrical panels must be installed in a readily accessible area with a minimum clearance of 30 inches (762 mm) wide, 3 ft (36 inches or 914 mm) deep, and 6. 5 feet (≈ 2 meter) high in front of the panel. The panelboard's door (hinged cover) shall be able to be opened. This guide explains typical wall-mount and floor-standing dimensions, how to read catalog sizes, and how to choose the right enclosure size for your layout. In practice, “standard sizes” usually means the common size families. The following clearances are specific to a single row of equipment located anywhere in a commercial building, including public spaces such as hallways, corridors and open rooms. The clearances are often referred to as the 36x30x78 Inches Rule to summarize the clearances. Front clearance: There. In the substation layout, the safety clearance between distribution devices refers to the minimum distance maintained between distribution devices or between distribution devices and other equipment or facilities. NEC Article 408 covers switchboards, switchgear, and Panelboards installation and applications. It takes the incoming power and safely distributes it to different circuits throughout your building.
