Types and Specifications of Explosion-proof Distribution Box Interfaces

Overview

Comprehensive guide on explosion-proof electrical boxes, including definitions, classifications, selection guidelines, testing certifications.

Key Takeaways

Explosion-proof distribution boxes are designed to safely manage electrical power and signal distribution in hazardous areas, with multiple types, materials, and interface options tailored to specific industrial requirements.

Types of Explosion-

Proof Distribution BoxesExplosion-proof distribution boxes are classified based on their function, voltage rating, and installation type: Low-voltage switchgear cabinets: GCK, GCS, MNS (withdrawable type) and GGD, GDH, PGL (fixed type) for 220V–380V applications. Comprehensive distribution boxes: XZW series for integrated power distribution. Box-type substations: ZBW series for compact substation applications.

Low-voltage distribution and construction site boxes: XL, GXL, and XF series for electrical control and temporary installations. Terminal and lighting distribution boxes: PZ20, PZ30 series. Electric metering boxes: PZ40 and XDD(R) series.

Surface-mounted and concealed distribution boxes: PXT(R)K-X/X-X/X-X/X-IPX series, where (R) indicates concealed installation, K specifies wiring method, and X/X denotes rated current/short-time withstand current. Protection Types and StandardsExplosion-proof boxes are designed according to international standards to prevent ignition of surrounding flammable gases or dust: Ex d: Flameproof enclosure. Ex e: Increased safety for electrical components.

Ex ia: Intrinsic safety for low-energy circuits. Ex tb: Dust protection by enclosure. Ex op pr: Protected optical radiation.

These boxes are certified under IECEx, ATEX, NEC, and other standards for Zone 1, Zone 2, Zone 21, Zone 22, or Class I/II Division 2 hazardous areas.

Materials and Construction

Metals: Copper-free aluminum, stainless steel, and brushed aluminum for high mechanical strength and corrosion resistance. Non-metallic: Glass fiber reinforced polyester (GRP) for chemical resistance and lightweight applications. Flame-retardant plastics: For lightweight and non-conductive installations.

Interface and Terminal Specifications

Cable entries and glands: Multiple configurations to accommodate different cable diameters and maintain enclosure integrity. Terminal types: Screw, spring, or modular terminals for flexible wiring. IP/NEMA ratings: Typically IP66 or NEMA Type 4X for dust and water ingress protection.

Ambient temperature range: Designed to operate in extreme temperatures, suitable for offshore, oil & gas, chemical, and industrial environments.

Installation Methods

Vertical or horizontal mounting. Surface-mounted or concealed installation. Hanging or exposed installation for construction sites or temporary setups.

Voltage and Current Ratings

Rated voltages: 220V, 380V, or customized per project. Rated currents and short-time withstand currents are specified per series (e.g., 250A/10kA), with customization available based on customer requirements. SummaryExplosion-proof distribution boxes combine robust materials, certified protection types, flexible terminal interfaces, and customizable installation options to ensure safe and reliable electrical distribution in hazardous areas.

Selecting the appropriate type depends on voltage, current, environmental conditions, and compliance with international explosion protection standards.
