Overview

Table 3 of IET Guidance Note 3 Inspection and Testing, recommends that construction site installations should be inspected and tested every 3 months. Portable tools used by contractors must be tested and proof of testing retained before they will be allowed on site. If you have receptacles in damp or outright wet locations, you must use ground-fault circuit interruptors (GFCIs). Temporary wiring on construction sites must comply with the electrical safety standards in 29 CFR 1926, Subpart K. The. In order that work can continue effectively and safely in periods of insufficient natural light, suitable internal and external artificial lighting must be installed. The Clean Neighbourhoods and Environment Act allows Local Authorities to undertake action when external light emitted from premises. For under 600 volts, head protection meets the requirements for Class A or B in American National Standards Institute (ANSI) standard Z 89.
