The core switch keeps restarting

Overview

A reboot loop in a Cisco switch stack is typically triggered by a configuration mismatch or an underlying software or hardware issue that causes the switches to fail during their boot-up process. The switch performs a random self-reboot. - Cisco Community NEW: Try the Beta AI Summary feature on posts in the Routing and SD-WAN forum. 01-24-2023 05:50 AM I need help with the switch. Although the switch software is highly reliable, a switch in the stack can experience a software issue that results in the crash and reboot of that switch. In. My entire network is run off of HP ProCurve 2910al-48G-PoE (J9148A) switches and everything has ran perfectly for 3 years. Last week we began experiences internet and network outages that would last approximately 1 minute. Upgrades are probably failing because of the above Cloud connection issue. I see Support has already commented in the case notes the same. We have a pair of Dell N3224P-ON switches and today's morning my colleague gave me a task and instructions to remove some unused VLANs.
